Amara Nwosu

Senior Software Developer — Cloud and Platform Engineering

Dublin, Ireland | amara.nwosu@example.com | linkedin.example.com/in/amara-nwosu | github.example.com/amaranwosu

PROFESSIONAL SUMMARY

Senior cloud and platform engineer with 13 years of experience in infrastructure, site reliability engineering, and internal developer platforms for SaaS, media streaming, and telecom companies. Builds self-service platforms on AWS, Google Cloud, Kubernetes, Terraform, and GitOps so product teams can ship safely without waiting on operations. Led an internal developer platform used by 180 engineers that cut new service provisioning from two weeks to under one day and raised deployment frequency from three releases a week to about 40 per day. Owns cloud cost management and reduced AWS spend by 27% without lowering reliability targets. Leads incident reviews and SLO design with engineering and product leaders, and mentors engineers moving into platform and SRE roles.

TECHNICAL SKILLS

Programming and scripting: Advanced: Go, Python, Bash, HCL (Terraform). Working knowledge: TypeScript, Rust.

Cloud platforms: Advanced: AWS (EKS, EC2, IAM, Organizations, VPC, RDS, Lambda), Google Cloud (GKE, Cloud Load Balancing, Cloud SQL). Working knowledge: Microsoft Azure.

Containers and orchestration: Kubernetes, Helm, Karpenter, Istio, Envoy, Kustomize, containerd.

Infrastructure as code and GitOps: Terraform, Terragrunt, Crossplane, Argo CD, Ansible, Packer.

CI/CD and developer platforms: GitHub Actions, GitLab CI, Backstage, golden-path service templates, progressive delivery with Argo Rollouts.

Observability and reliability: Prometheus, Grafana, Loki, Tempo, OpenTelemetry, PagerDuty, SLOs and error budgets, chaos engineering, blameless postmortems.

Security and governance: AWS landing zones, service control policies, least-privilege IAM, OPA Gatekeeper, HashiCorp Vault.

FinOps: Cost allocation and tagging, savings plans, rightsizing, Graviton and spot adoption, cost anomaly alerting.

Industry experience: B2B SaaS (HR technology), video streaming, telecommunications.

PROFESSIONAL EXPERIENCE

Cobaltline Software (B2B SaaS, HR technology) — Dublin, Ireland

Senior Platform Engineer, Developer Platform Lead — *Sep 2021 – Present*

- Lead a five-person platform team that built an internal developer platform on Backstage, Argo CD (GitOps), and Crossplane, used by 180 engineers; provisioning a production-ready service fell from two weeks to under one day.
- Designed a multi-account AWS landing zone with Terraform modules, service control policies, and centralised logging, consolidating 41 ad hoc accounts and removing standing administrator access.
- Reduced monthly AWS spend by 27% (about EUR 95,000 per month) through Graviton migration, Karpenter node autoscaling, savings plans, and rightsizing reviews with each product team.
- Introduced SLOs, error budgets, and an OpenTelemetry, Prometheus, and Grafana observability stack; median time to restore service fell from 58 to 22 minutes, with blameless postmortems tracked to completion.
- Worked with engineering managers and product leadership to move from three releases per week to about 40 deployments per day using progressive delivery with Argo Rollouts.

Brightwave Media (video streaming) — London, United Kingdom

Senior Site Reliability Engineer (SRE until 2019) — *Mar 2017 – Aug 2021*

- Led the migration of 70 services from self-managed Kubernetes on virtual machines to Google Kubernetes Engine with Istio, reducing cluster maintenance effort by roughly 60%.
- Owned capacity planning for live sports events with traffic peaks of six times normal load, using load tests and pre-scaling runbooks; the platform met its availability target through four major tournaments.
- Built CI/CD pipelines with GitLab CI and Helm, including automated rollback on failed health checks.
- Ran quarterly chaos engineering game days that exposed weaknesses in DNS failover and cache warm-up before they caused customer-facing outages.

Synthetic profile created for talent-matching software testing. All people, employers, institutions, events, and credentials are fictional.

Atlantic Fibre Networks (telecommunications) Lagos, Nigeria
DevOps Engineer (Systems Administrator until 2015) *Jul 2013 – Feb 2017*

- Automated provisioning and patching of about 300 Linux servers with Ansible, cutting new server setup from two days to two hours.
- Replaced Nagios checks with Prometheus and Grafana monitoring for network and billing systems, reducing false alerts by about half.
- Wrote operational runbooks and trained the network operations centre team on first-line incident response.

SELECTED PROJECTS

Golden-path service templates
Technologies: Backstage software templates, Helm, Terraform, GitHub Actions, OPA policies

- **Problem:** Each team assembled pipelines, dashboards, and alerts differently, so new services often launched without monitoring.
- **Contribution:** Designed templates that create a repository, pipeline, Kubernetes deployment, dashboards, and SLO alerts in one step, with policy checks built in.
- **Result:** 85% of new services since 2023 were created from the templates, and none launched without alerting.

Cost anomaly bot
Technologies: Python, AWS Cost Explorer API, AWS Lambda, Slack API

- **Problem:** Cost spikes were noticed only when the monthly invoice arrived.
- **Contribution:** Built daily anomaly detection per team and service, with Slack alerts sent to the owning team.
- **Result:** Caught a misconfigured log pipeline costing about EUR 7,000 per week within two days of the change.

Zero-downtime Kubernetes upgrade framework
Technologies: Go, Kubernetes API, Argo Rollouts, PodDisruptionBudgets

- **Problem:** Cluster upgrades required weekend maintenance windows.
- **Contribution:** Built tooling that validates disruption budgets, drains nodes in waves, and rolls back automatically.
- **Result:** Completed 14 cluster upgrades during business hours with no customer-facing downtime.

EDUCATION

Lagoon State University of Technology Lagos, Nigeria
B.Eng. Electrical and Computer Engineering *2008 – 2013*

- Second-class upper honours; final-year project on load balancing for campus network services.
- Coursework: computer networks, operating systems, digital systems, control systems.

HACKATHONS, CONFERENCES, AND PROFESSIONAL ACTIVITIES

- **Platform Engineering Day Dublin (2025)** — Speaker: “Golden paths, not golden cages”, on balancing platform standards with team autonomy.
- **Dublin Cloud Native Circle (2022 – Present)** — Co-organiser of a monthly meetup on Kubernetes, observability, and platform engineering.
- **GreenOps Hackathon, Dublin (2023)** — Built a carbon-aware Kubernetes batch scheduler prototype that shifted flexible jobs to lower-carbon hours using a public grid-intensity feed.

CERTIFICATIONS AND ADDITIONAL QUALIFICATIONS

Certifications (illustrative): Kubernetes Platform Operations Track, Meridian Cloud Academy (2020); Cloud Security Foundations, Harborview Security Institute (2022).

Mentoring: Mentors two engineers on the Cobaltline platform team and volunteers with a local programme for people moving into DevOps and SRE careers.

Languages: English (native), Igbo (native), French (intermediate).

Synthetic profile created for talent-matching software testing. All people, employers, institutions, events, and credentials are fictional.
