ABOUT ME

Motivated electrical engineering student with a hands-on approach to problem-solving and a strong focus on practical application. Experienced in software development, data modeling, and operating systems, with a solid foundation in computing engineering and informatics.

EDUCATION

2018 - 2022
XIII Belgrade gymnasium

High School Graduate – Science and Mathematics Stream

Completed studies at a Serbian high school with High National Distinction status specialized for students talented in mathematics, physics, and computer science.

2022 - Present
Faculty of Electrical Engineering

Student of Computer Engineering and Informatics

Gained comprehensive knowledge of object-oriented programming, complexity of algorithms, computer technology, signals and systems, computer architecture, operating systems, computer networks.

PROJECTS

- Embedded Flutter Proof of Concept (PoC) | DevOps & Infrastructure
- Mountain Cabin Rental Platform | Full-Stack Developer
- Designed and implemented a small OS on a Linux-based toolchain
- Completed as part of "Object-Oriented Programming" coursework
- Project: Recoil - Gameplay Programmer & Systems Developer
  - Engage Game Jam 2026 | Tools: Unity, C#, Git
- Coded software in C, C++, Java (coded several small games using Eclipse), Python
- Designed Control Unit, Device Design - PS/2 Protocol, Device Design – VGA

SKILLS

- Organization
- Responsibility
- Persistence
- Critical thinking
- Collaboration
- Communication
- Adaptability

- Development Tools: Visual Studio, Eclipse, CLion, PyCharm, Docker
- Automation, QEMU emulation
- Linux (Ubuntu), Bash scripting
- Git (completed the PSSOH workshop titled "Practical Git"), Git Submodules
- DATABASES: MySQL, SQLite, MongoDB

- PROGRAMMING: Python, C/C++, OOP(Java/C++), Assembly, JavaScript, TypeScript
- WEB DEVELOPMENT (full-stack development): HTML, CSS, Angular, Node.js, Spring Boot

EXPERIENCE

DevOps Engineer Intern | Zuhlke Engineering, Belgrade (May-June 2026)

GitHub: github.com/nemanjadjekic/embedded_flutter_poc

- **Containerization**: Built a unified **Docker (Ubuntu 22.04)** development environment to eliminate setup conflicts and automate teammate onboarding.
- **Architecture & Quality**: Managed complex repository dependencies using **Git Submodules**. Set up automated pre-commit syntax linting to catch script errors early.
- **Build Optimization**: Configured caching and **QEMU emulation** for virtual testing, removing the dependency on physical hardware boards.

Mountain Cabin Rental Platform | Full-Stack Developer

GitHub: github.com/milangavric2003/cabin-booking-portal

- Built a decoupled full-stack web application with an Angular frontend and a Node.js/Express REST API.
- Implemented Role-Based Access Control (RBAC) using JWT and route guards for distinct user workflows.
- Designed optimized data tables featuring custom client-side search, multi-criteria filtering, and column sorting.
- Integrated a structured media upload system for property galleries and dynamic credit card type parsing.
- Utilized MongoDB (via Mongoose) for scalable data modeling and user profile protection.

HACKATHON – EPFL, SWITZERLAND

GitHub: https://github.com/jovanzsavic/LauzHack

- Developed Local Discovery, an AI-powered place exploration web app combining OpenStreetMap data with LLM-generated descriptions and images.
- Implemented full-stack solution with Python (Flask) backend and JavaScript + Leaflet.js frontend.
- Used Together.ai (Llama 3.1, Flux) for contextual text and image generation with intelligent fallback pipelines.

ACTIVITIES

In my free time, I engage in sports: playing basketball and football in an amateur league, regular gym-goer focused on fitness, table tennis and chess player in the university section. I am also a passionate cyclist and have taken part in long-distance rides, including voyages over 100 km. I enjoy socializing and making new acquaintances.
