Camila Ferreira

Senior Software Developer — Full-Stack Engineering

São Paulo, Brazil | camila.ferreira@example.com | linkedin.example.com/in/camila-ferreira | github.example.com/camilaferreira | camilaferreira.example.com

PROFESSIONAL SUMMARY

Senior full-stack engineer with 12 years of experience building web products in digital health, e-commerce, and agency environments. Works across the stack with TypeScript, React, Next.js, Node.js, GraphQL, and PostgreSQL, and is most effective at the boundary between product design and engineering. Leads a cross-functional squad with a product manager and designers, and has improved mobile page performance, booking conversion, and release reliability on a patient-facing application used by more than 150,000 people each week. Builds design systems with accessibility (WCAG 2.1 AA) as a default and introduced end-to-end testing that made daily releases safe. Enjoys mentoring junior developers and is interested in offline-first web applications and inclusive product design.

TECHNICAL SKILLS

Programming languages: Advanced: TypeScript, JavaScript, SQL, HTML, CSS. Working knowledge: Python, Ruby, Kotlin.

Frontend frameworks and libraries: React, Next.js, Redux Toolkit, TanStack Query (React Query), Tailwind CSS, Storybook, Vite. Working knowledge: Angular, React Native.

Backend and APIs: Node.js, NestJS, Express, GraphQL (Apollo Server and Apollo Federation), REST API design, WebSockets, OAuth 2.0 and OpenID Connect.

Databases: PostgreSQL, Redis, Prisma ORM, PostGIS. Working knowledge: MongoDB, Elasticsearch.

Testing and quality: Jest, React Testing Library, Playwright, Cypress, axe accessibility testing, Lighthouse performance budgets, code review standards.

Cloud and DevOps: AWS (Lambda, ECS, RDS, CloudFront), Vercel, Docker, GitHub Actions, Sentry, Datadog. Working knowledge: Terraform.

Product development and collaboration: Discovery workshops with designers, A/B testing with analysts, feature flags, accessibility audits, agile delivery, technical leadership, mentoring.

Industry experience: Digital health, e-commerce marketplaces, digital agency client delivery.

PROFESSIONAL EXPERIENCE

Vereda Saúde Digital (digital health) — São Paulo, Brazil

Senior Full-Stack Engineer and Tech Lead, Patient Experience — *Jan 2022 – Present*

- Lead a squad of six engineers working with a product manager and two product designers on the patient appointment web app built with React, Next.js, and NestJS; weekly active patients grew from 40,000 to 155,000 over three years.
- Rebuilt the booking flow with server-side rendering, route-level code splitting, and image optimization, reducing mobile Largest Contentful Paint from 4.1 s to 1.9 s and raising booking conversion by 11% in a controlled A/B test.
- Created a shared design system in Storybook with the design team: 70 documented components, keyboard navigation, and WCAG 2.1 AA checks in CI; automated axe violations fell by 80%.
- Introduced Playwright end-to-end tests for the 12 most critical patient journeys and a quarantine process for flaky tests, cutting CI time from 28 to 12 minutes while moving from weekly to daily releases.
- Defined GraphQL schema governance with Apollo Federation across three teams, including a deprecation policy and schema review checklist that removed most breaking client changes.

Mercado Tinta (e-commerce marketplace) — São Paulo, Brazil

Senior Full-Stack Engineer (Full-Stack Engineer until 2020) — *Mar 2018 – Dec 2021*

- Built the seller dashboard in React, TypeScript, and Redux Toolkit on Node.js and Express APIs backed by PostgreSQL, serving about 22,000 active sellers who manage orders, stock, and payouts.
- Replaced a legacy PHP and jQuery checkout incrementally using the strangler fig pattern, moving payment, shipping, and coupon steps to a Node.js service with no planned downtime and a 7% reduction in checkout abandonment.
- Implemented a feature flag and experimentation service with data analysts, allowing product teams to run more than 60 A/B tests per year with consistent metric definitions.

Synthetic profile created for talent-matching software testing. All people, employers, institutions, events, and credentials are fictional.

- Built real-time order notifications over WebSockets with Redis pub/sub, replacing 30-second polling and reducing load on the orders API by about 35%.
- Mentored three junior developers and organized the frontend guild, which agreed on shared linting, TypeScript strict mode, and code review guidelines.

Pixelnorte Digital Agency (digital agency) Recife, Brazil
Web Developer *Feb 2014 – Feb 2018*

- Delivered more than 25 client web applications for retail, education, and public-sector clients using Angular, Ruby on Rails, and Node.js, often owning projects from client discovery to deployment.
- Introduced Docker-based development environments and project templates, shortening onboarding of new developers from three days to half a day.
- Rebuilt a regional university website with 40,000 monthly visitors, including the accessibility fixes required by the client's public-sector guidelines.

SELECTED PROJECTS

Trilha — offline-first app for community health workers
Technologies: React, TypeScript, service workers, IndexedDB, Workbox, Node.js sync API

- **Problem:** Health workers in areas with unreliable connectivity lost home-visit records when the network dropped.
- **Contribution:** Designed the offline data model and conflict-resolution rules, built the sync API, and ran field usability tests together with the designers.
- **Result:** A pilot with 120 health workers recorded 9,000 visits with no reported data loss; 97% of sync conflicts were resolved automatically.

OpenForm Kit — accessible form library (open source)
Technologies: React, TypeScript, React Hook Form, Storybook, axe-core

- **Problem:** Product teams rebuilt validation and error messages inconsistently and often missed screen reader support.
- **Contribution:** Designed the library API and accessible error patterns, and wrote the documentation and examples.
- **Result:** Used in four internal products; form-related accessibility defects found in audits fell from 31 to 6.

Pharmacy stock finder
Technologies: Next.js, PostgreSQL with PostGIS, Mapbox, Redis caching

- **Problem:** Patients could not see which nearby pharmacies had their prescribed medication in stock.
- **Contribution:** Built geospatial search and the caching layer, and agreed an eight-week MVP scope with the product manager.
- **Result:** Launched in two cities with median search response times under 250 ms.

EDUCATION

Universidade Atlântica de Recife Recife, Brazil
B.Sc. Computer Science *2010 – 2013*

- Final project: usability study and redesign of a public health appointment portal.
- Relevant coursework: human-computer interaction, software engineering, databases, computer networks.

HACKATHONS, CONFERENCES, AND PROFESSIONAL ACTIVITIES

- **ReactSul Conference, Porto Alegre (2024)** — Speaker: "Fast on inexpensive phones", a talk on performance budgets and server-side rendering for patient-facing web apps.
- **Hackathon Saúde Digital, São Paulo (2021)** — Full-stack developer on a four-person team that built a symptom triage chatbot prototype with Next.js and a rules engine in 36 hours.
- **CodeMulheres Community (2019 – Present)** — Volunteer mentor for women entering web development; runs quarterly React and accessibility workshops.

CERTIFICATIONS AND ADDITIONAL QUALIFICATIONS

Certifications (illustrative): Web Accessibility Practitioner Program, Atlântica Digital School (2021); Cloud Fundamentals for Developers, Meridian Cloud Academy (2019).

Leadership: Tech lead for a six-person squad; frontend guild organizer (2019 – 2021).

Languages: Portuguese (native), English (fluent), Spanish (professional working proficiency).

Synthetic profile created for talent-matching software testing. All people, employers, institutions, events, and credentials are fictional.
